

SAMM™

Satellite Assisted Marine Management

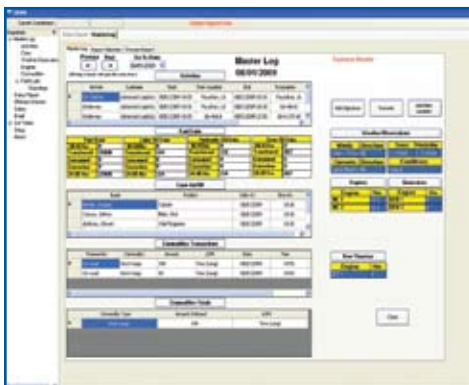

Advanced Logistics knows that the delivery and use of real-time information is a competitive necessity. SAMM is a web-enabled and interactive electronic vessel management system optimized for the offshore oil and gas workboat industry. The proprietary software provides the capability for a vessel to generate numerous operational reports onboard and to transmit the data to the shore including GPS positions in a near real time environment. SAMM collects pertinent vessel information, transmits the data by satellite and synchronizes it with a secure internet accessible shore application. Specific care was given to provide an intuitive crew interface requiring minimal keyboard interaction. Advanced Logistics' products, including SAMM, provide clients with improved efficiency through time and cost-saving technology combined with a user-friendly system, unlike any other in the marine industry.

SAMM provides:

- Electronic Logs
- Fuel & Lube Management
- Voice & Email Communication
- Engine Hours*
- Crew Management*
- Vessel Activities
- Commodity Tracking
- Vessel Status Reports
- Safety Reporting
- Customer Charge Code Application
- Electronic Signatures
- GPS Mapping – Shore Side Application
- Interactive Shore Application
- Subsistence Reports
- Utilization Reports
- Passenger Reports
- Audit Reports
- Search Features
