

ezTRAC.Manifesting™

Track and Record Material Movement

ezTRAC.Manifesting™ is a comprehensive web-based application designed to track and record material movements to and from user locations. Corporate offices, shore bases, rigs and any field locations with access to the internet can have admission through a secure login. The system has the ability to manifest and track materials ranging from rental items to pipe to consumables. The system can search for an item(s) based on an array of item records such as item name, vendor, charge code, serial number, location and other search criteria. The system requires an item to be "received" in order to ensure effective (closed loop) tracking.

Leading the Industry in Marine & Logistics Management Technology

Users

- Multi-user/location assignment for multiple delivery management
- Full admin/super user
- User assigned locations for shipping and receiving

Admin

- Charge codes
- Assigned to user locations
- Locations/user locations
- Quantity type
- Modes of transportation
- Vendor management

Item Tracking

- Shipping accountability
- Receiving accountability
- Organizational status (on hold, shipped, rejected, received)
- One line entry and item flows in the system
- Attachments to items
- Sorting of grids
- Exporting of grids to Excel
- Easy on-screen edits

- Historical tracking of item movements
- Users can see what is coming and going
- Nothing is deleted out of the system
- CFR-49 table included
 - Proper shipping information
 - Correctly applied and labeled shipping information on the manifest
 - Regulatory compliance
- Delete/undelete feature (Super user Admin)

Manifesting

- Easy application
- Remove items from manifest
- Add items to manifest
- Multiple selections for quicker manifest creation
- Multiple deliveries per manifest
- Return to vendor portraits
- Cost for delivery of items on manifest
- Automatic signing once manifest is "shipped"
- Easy access to all unopened manifest through "My Open Manifest" feature
- Easy & quick creation
- Tally and build when ready to ship

Receiving Items

- Multi-select
- Complete item track
- Items on hold
- Items to be shipped back
- Items rejected
 - Improved communication between the shipper and the receiver
 - Quicker resolve on missing or lost items
- Automatic signing once manifest is "received"

Alt Destinations

- Redirect items if needed to a different user site, while maintaining the current charge code/location

Search

- Comprehensive search for items in the system
- Comprehensive search for manifests in the system

Accessibility

- 24/7 web application
- User friendly interface
- Dynamically built to grow and shrink

The Advanced Logistics Reporting Dashboard is a customizable user interface designed to allow the ability to organize Advanced Logistics software applications into one central web-based location. The Reporting Dashboard showcases near real-time information based upon user preferences, thus allowing for centralized AFE cost management reporting, improved asset management and a collaborative work environment for all users.

Advanced Logistics

Advanced Logistics understands technology in logistics management is one of the fastest growing segments in the oil & gas industry. As E&P companies and production operators seek more cost effective solutions to logistics challenges in land, marine and aviation transportation, those armed with knowledge and real time information will have the advantage. Real time technology enables clients to translate acquired data into useful information then transform that information into useful knowledge for improved efficiency, productivity and decision making... anytime, anywhere.

Web-based Applications and Services

SAMM™ - web enabled and interactive electronic vessel management system

Preventer™ - automated, company-specific preventive maintenance procedures and inspections

SAMMPremier™ - a web interface that facilitates communication from SAMM to an oil company or vessel customer to access accounting and logistics data

DTAR™ (Daily Transportation and Activity Report) - centralizes shore base data including activities, allocations, operations and costs

ezTRAC.manifesting™ - materials manifesting and item tracking

ezTRAC.gps™ - monitors and tracks equipment using a GPS transmitter

LTM™ (Land Transportation Management) - facilitates scheduling, dispatching, invoice auditing and validation for transportation of materials and equipment
